

Apex Systems

RFP Response — Procurement Evaluation Platform

Submission Date	2026-03-01
Historical Experience Rating	4.8 / 5.0
Prepared for	Procurement Evaluation Committee (synthetic classroom exercise)

Executive Summary

Apex Systems proposes a cloud-native procurement automation platform built on a microservices architecture. We understand the requirement for a scalable, secure, and highly integrated solution and believe our technical depth is the strongest differentiator in this proposal.

Proposed Solution

Our solution is composed of independently deployable microservices communicating over gRPC and REST APIs, deployed on Kubernetes for horizontal scalability. We provide native integrations with SAP Ariba, Oracle Procurement Cloud, and Coupa via pre-built connectors. The architecture supports multi-region active-active deployment and has been load-tested to 50,000 concurrent users. Our platform uses an event-driven design (Kafka) to keep downstream systems synchronized in near real time.

Timeline & Team

Delivery is planned over 22 weeks across four phases: Discovery (3 weeks), Core Build (10 weeks), Integration & Hardening (6 weeks), and Go-Live & Hypercare (3 weeks). The core delivery team includes a Technical Architect, 4 senior engineers, 1 DevOps engineer, and a dedicated project manager. A RAID log will be maintained jointly with the customer, with a documented risk mitigation plan for integration slippage and data migration risk.

Pricing & Assumptions

Total Cost of Ownership over 3 years: \$1,240,000, comprising \$410,000 implementation and \$276,667 per year in platform and support fees. Pricing assumes a single production region plus one DR region, up to 500 named users, and standard connector packages for the three ERPs listed above. Additional connectors are quoted at \$18,000 each. Assumes customer provides a dedicated product owner for the duration of the engagement.

Security & Compliance

Apex Systems holds SOC 2 Type II and ISO 27001 certifications (available on request under NDA). All data is encrypted at rest (AES-256) and in transit (TLS 1.3). We support SSO via SAML 2.0 and OIDC,

role-based access control, and full audit logging retained for 7 years. Annual third-party penetration testing reports are shared with customers under NDA. GDPR and CCPA data processing addenda are available.

Support & References

24/7 Severity-1 support with a 30-minute response SLA, and a named Customer Success Manager for the first 12 months. Apex has delivered 14 similar procurement transformation projects for enterprise manufacturing and logistics clients over the past 5 years. References available for two Fortune 500 manufacturing customers upon request.
